

A CLEARER VISION FOR THE PERFECT FINISH

Europa PB

fully automated double sided laminator

The Europa PB is a uniquely configured, fully automatic double-sided laminator for sheets up to B2 size.

Compact and easy to use the Europa PB is designed for the growing photobook and print-on-demand market.

Its features make it equally adept at running both digital and lithographic output.

A CLEARER VISION FOR THE PERFECT FINISH

Europa PB

fully automated double sided laminator

The suction feeder offers a deep pile for longer run work and is easily adjustable for a variety of different sheet sizes.

The unique double-sided configuration comprises two separately controlled laminating stations, each with a heated chrome roller and rubber nip roller to give an identical finish to each side of the sheet. One laminating station can be turned off when laminating a single side.

A scrolled infeed roller presents lightweight and digital output to laminating and nip rollers where a missing sheet detector helps prevent unwanted wraparounds.

The centralised plc control panel offers ease of operation.

The mandrel has a hinged support and film can be adjusted laterally on the run to minimise waste and down time.

A decurl bar, which may be altered on the run, is fitted to assist in giving a flat sheet when laminating single-sided whilst the positioning of the perforator overcomes any potential issues caused by poor film roll profiles and allows higher speeds to be maintained.

The adjustable burster automatically separates sheets and a cushion of air supports them as they are delivered into the catch tray.

The standard catch tray may be adjusted to suit various sheet sizes up to B2. Optionally a sheet length up to 1,050mm can be accommodated.
