

A CLEARER VISION FOR THE PERFECT FINISH

cross cutter

modular guillotine cutter

The Cross Cutter forms part of D&K's guillotine cutter range for the encapsulation process.

Modular in construction it may be added to any encapsuator either on its own, to form a semi-automatic line, or with a modular feeder to give a fully automatic system.

The controls are centrally located for ease of operation.

Speed adjustable exit belts help to drive the encapsulated sheets into a Jogger (or other receptacle). They are especially useful when encapsulating with thinner films.

An electrically interlocked catch tray is incorporated to collect trim waste which doubles as a guard for the lower blade as the cutter will only operate when the tray is in position.

A Jogger is supplied as standard with the Cross Cutter.

A bail arm regulates the speed of the cutter and allows it to keep pace with the encapsulator.
