# Duo System

Discover the Perfect Separation Solution for Every Laminating Job

In high-performance laminating, the sheet-separation method you choose directly shapes the productivity, quality, and versatility of your entire production line. Traditional systems rely on either bursting rollers or a flying knife (FK)—each with their own strengths.

But now there's an innovation that goes beyond either method alone..

A CLEARER VISION FOR THE PERFECT FINISH

# Duo System

DUO - a ground breaking solution that brings together the speed of bursting and the precision of flying knife cutting in one intelligently designed machine. The new DUO separating system can be incorporated into the Jupiter and Triton range of laminators.

The sheet web runs through two sequential separation units, and the operator can switch between them in seconds via the touch screen with no downtime

## **Bursting Rollers**

- Outstanding speed—up to 60 m/min and beyond depending on the model
- Maximum running speed for standard films
- Straightforward mechanics for lower purchase and service costs
- Ideal for large volume runs using standard burstable films

## **What makes DUO a game changer?**

- Zero downtime when switching between methods
- One machine that replaces two, lowering investment, energy consumption and floor space.
- Flexible performance for both long runs and small specialty orders

## **The Bottom Line**

The DUO system is the only solution that delivers the full speed of bursting separation and precision of the flying knife—all in one smart, seamless machine, without compromise.

## **Flying Knife**

- Works with even the toughest-to-tear films such as Polyester and Nylon
- Perfect, crisp edges with zero fraying
- Exceptional control that minimizes the risk of sheet damage
- Quiet operation
